Calgary AirFreight & LogisticsCentre™ 2
Calgary, Alberta, Canada

YYC CALGARY AIRPORT AUTHORITY

CASE STUDY

OBJECTIVE

Create a Master Planned air freight business park that promotes the growth of air freight and logistics at Calgary International Airport and generates a broader, more diversified revenue base for the Airport.

STRATEGY

Working with the Calgary Airport Authority, NAV Canada, and Transport Canada, Trammell Crow Company developed an 18 acre Master Planned Business Park which achieves the highest and best use of the Airport land. Trammell Crow Company developed an industrial business park that offers efficient and economical office and warehouse space with exceptional access to federal and provincial highways, immediate proximity to the Airport infrastructure and amenities, and direct access to the airfield operations area.

VALUE CREATION

AirFreight & LogisticsCentre™ 2 offered exceptional highway accessibility as well as an intelligent building design, perfect for the distribution needs of Anixter International and Miele Corporation. In addition, the unique Master Plan permits the efficient flow of airfreight from the warehouse to the secure airside and vice versa without compromising security of the freight, and avoiding the inconvenience and added cost of trucking freight from the AOA to an "off-airport" facility. The Master Plan addresses the need for high volume through put by offering exceptional ingress and egress for high volume ground transportation.

Quick Facts

Completion: June 2007
